A; Description: Sequencing the distal X chromosome of Drosophila melanogaster.
A; Reference number: Z17665
A; Accession: T1385
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-488 <CAT>
A; Residues: 1-488 <CAT>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (BY SIMILARITY).

SUBCELLULAR LOCATION: Cytoplasmic.

PTM: CLEAVAGE BY GRANZYME B, CASPASE-6, -8 AND -10 GENERATES 7

TWO ACTIVE SUBUNITS. ADDITIONAL PROCESSING OF THE PROPERTIDES 1

LIKELY DUE TO THE AUTOCATALYTIC ACTIVITY OF THE ACTIVATED PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBUNIT OF CASPASE-7 PROTEASE AND THE LARGE SUBUNIT OF CP932 ALSO OCCUR FULL VERSA (BY SIMILARITY).

SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          O J. 15:1012-1020(1996).

FUNCTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES RESPONSIBLE FOR APOPTOSIS EXECUTION. AT THE ONSET OF APOPTOSIS IT PROTECLYTICALLY CLEAVES POLY(ADP-RIBOSE) POLYMERASE (PARP) AT A 216-ASP-|-GLY-217 BOND. CLEAVES AND ACTIVATES STEROL REGULATORY ELEMENT BINDING PROTEINS (SREBPS) BETWEEN THE BASIC HELIX-LOOPHELIX LEUCINE ZIPPER DOMAIN AND THE MEMBRANE ATTACHENT DOMAIN. CLEAVES AND ACTIVATES CASPASE-6, -7 AND -9 (BY SIMILARITY). SUBUNIT: HETERODIMER OF A 17 kDa (P17) AND A 12 kDa (P12) SUBUNIT.

SUBUNIT: HETERODIMER OF A 17 kDa (P17) AND A 12 kDa (P12) SUB
SUBCELLULAR LOCATION: Cytoplasmic.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN LUNG, SPLEEN, HEART,
AND KIDNEY. MODERATE LEVELS IN BRAIN AND SKELETAL MUSCLE, AND
IN TESTIS. ALSO FOUND IN MANY CELL LINES, HIGHEST EXPRESSION
CELLS OF THE IMMUNE SYSTEM.
PYM: CLEAVAGE BY GRANZYME B, APAF-1, CASPASE-6, -8 AND -10
GENERATES THE TWO ACTIVE SUBUNITS. ADDITIONAL PROCESSING OF THE PROPERTIDES IS LIKELY DUE TO THE AUTOCATALYDE CACTIVITY OF THE

FUNCTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES
RESPONSIBLE FOR APOPTOSIS EXECUTION. AT THE ONSET OF APOPTOSIS IT
PROTECLYTICALLY CLEAVES POLY(ADP-RIBOSE) POLYMERASE (PARP) AT A
216-ASP-1-GLY-217 BOND. CLEAVES AND ACTIVATES STEROL REGULATORY
ELEMENT BINDIAG PROTEINS (SREBPS) BETWEEN THE BASIC HELLY-LOOP-
HELLX LEUCINE ZIPPER DOMAIN AND THE MEMBRANE ATTACHMENT DOMAIN.
CLEAVES AND ACTIVATES CASPASE-6, -7 AND -9 (BY SIMILARITY).
SUBUNIT: HETERODIMER OF A 17 kDa (P17) AND A 12 kDa (P12) SUBUNIT

FUNCTION: INVOLVED IN THE ACTIVATION CASCABOR
FUNCTION: INVOLVED IN THE ACTIVATION CASCABOR
RESPONSIBLE FOR APOPTOSIS EXECUTION. AT THE ONSET OF APOPTOSIS IT
PROTEOLYTICALLY CLEAVES POLY(ADP-RIBOSE) POLYMERASE (PARP) AT A
216-ASP-1-GLY-217 BOND. CLEAVES AND ACTIVATES STEROL REGULATORY
ELEMENT BINDING PROTEINS (SREBPS) BETWEEN THE BASIC HELIX-LOOP-
HELIX LEUCINE ZIPPER DOMAIN AND THE MEMBRANE ATTACHMENT DOMAIN.
CLEAVES IL-1 BETA BETWEEN AN ASP AND AN ALA, RELEASING THE MATURE
CYTOKINE WHICH IS INVOLVED IN A VARIETY OF INFLAMMATORY PROCESSES.
SUBGUST: HETERODIMER OF A 17 kDa (P17) AND A 12 kDa (P12) SUBGUST
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PTM: CLEAVAGE BY GRANZYME B, CASPASE-5, -8 AND -10 GENERATH TWO ACTIVE SUBUNITS. ADDITIONAL PROCESSING OF THE PROPEPTIL LIKELY DUE TO THE AUTOCATALYTIC ACTIVITY OF THE ACTIVATED PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBUNIT OF CASPASE-7 PROTEASE AND THE LARGE SUBUNIT OF CPP32 ALSO OCCUSANDED VICE VERSA (BY SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Molecular ordering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Biol. Chem.
                                                                                                                                                                                                                         TESTIS, AND SKELETAL MUSCLE.

PTM: GENERATION OF THE SUBUNITS REQUIRES ASSOCIATION WITH TO PICTURE.

DISC, WHEREAS ADDITIONAL PROCESSING IS LIKELY DUE TO THE AUTOCATALYTIC ACTIVITY OF THE ACTIVATED PROTEASE. GRANZYME CASPASE-10 CAN BE INVOLVED IN THESE PROCESSING EVENTS.

SIMILARITY: BELONGS TO PETIDASE FAMILY C14.

SIMILARITY: CONTAINS 2 DEATH EFFECTOR DOMAINS (DED).
                                                                                                                                                                       European Bioinformatics Institute.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RECRUITS IT TO EITHER RECEPTORS. THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS FLICE/MACH PROTEOLYTIC ACTIVATION. THE ACTIVE DIMERIC ENZYME IS THEN LIBERATED FROM THE DISC AND FREE TO ACTIVATE DOWNSTREAM APOPTOTIC PROTEASES. PROTEOLYTIC FRACMENTS OF THE N-TERMINAL PROPEPTIDE (TERMED CAP3, CAP5 AND CAP6) ARE LIKELY RETAINED IN THE DISC. CLEAVES AND ACTIVATES CASPASE 3, -4, -6, -7, -9, AND -10. MAY PARTICIPATE IN THE GRANZYME B APOPTOTIC PATHWAYS. PROTEOLYTICALLY CLEAVES POLY(ADP-RIBOSE) POLYMERASE (PARP). HYDROLYZES THE SMALL-MOLECULE SUBSTRATE, AC- ASP-GLU-VAL-ASP-|-AMC. LIKELY TARGET FOR THE COMPON VIRUS CRMA DEATH INHIBITORY PROTEIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: MOST UPSTREAM PROTEASE OF THE ACTIVATION CASCADE CASPASES RESPONSIBLE FOR THE FAS-RECEPTOR MEDIATED (CD95) A THEFR-1 INDUCED CELL DEATH. BINDING TO THE ADAPTOR MOLECULE THEFR-1 INDUCED CELL DEATH.
